

World Water Day

On March 22nd, students at SIS@BDNC celebrated World Water Day to focus their attention on the importance of water. The theme for World Water Day 2018 was **Nature for Water**.

Today, 2.1 billion people live without safe drinking water at home; affecting their health, education and livelihoods. It is a goal for the world to ensure that everyone has access to safe water by 2030, and includes targets on protecting the natural environment and reducing pollution.

it is difficult, especially in places like Vietnam where we are fortunate to have an abundance of water, to try and educate young children about the importance of protecting the world's water supply. But just by creating awareness – **in particular with regards to the pollution of our rivers, dams and oceans** - we can all do a lot to change our thinking and thus change our world – it starts with us.
